

SocialApp

This app has the role to bring together peoples with the same desires, hobbies etc. Through it, the users, after authentication, can see the groups of their interests and the member of them.

Features:

- Authentication
- View all groups
- View Group Details/ members

Patterns:

- UnitOfWork pattern in user manager server (which deals with the authentication) and CoreService (which deals with requests related to users groups)
- The application is containerized in Docker by using a docker-compose.yaml file. Each microservice is defined with their dependencies and relationships.
- CORS
